

Question:

Given a row wise and column wise sorted matrix, find out whether element **k** is present or not.

A :

	0	1	2	3
0	-5	-2	1	13
1	-4	0	3	14
2	-3	2	6	19

K = 13 True

K = 2 True

K = 15 False

Brute Force

Iterate over entire matrix and search for K

T.C: $O(N \cdot M)$

S.C: $O(1)$

Efficient Approach:

	0	1	2	3
0	5	10	15	20
1	6	12	20	23
2	7	14	21	30
3	17	26	33	48

if (A[row][col] == k)
return True

elif (A[row][col] > k)
col--

else
row++

k = 14 \Rightarrow True

k = 17

	0	1	2	3
0	5	10	15	20
1	6	12	20	23
2	7	14	21	30
3	17	26	33	48

k = 16

✓

	0	1	2	3
0	5	10	15	20
1	6	12	20	23
2	7	14	21	30
3	17	26	33	48

5	10	15	20
6	12	20	23
7	14	21	30
17	26	33	48

$K = 25$

Search for target in Sorted Matrix

```

bool searchInMatrix(int arr[n][m], int target){
    row = 0, col = m-1;

    while(row < n && col >= 0){
        if(arr[row][col] == target)
            return true;
        else if(arr[row][col] < T){
            row++;
        }
        else
            col--;
    }
    // If element is not found, return false
    return false;
}

```

T.C: $O(N+M)$

S.C: $O(1)$

Submatrix: contiguous part of a matrix.
A contiguous set of rows and cols

c_1

c_2

$r_1: [0, 1]$

r_1

	0	1	2	3
0	5	10	15	20
1	6	12	20	23
2	7	14	21	30
3	17	26	33	48

r_2

$\Rightarrow r_1 = 1$

$c_1 = 1$

(Top-Left)

$r_2 = 3$

$c_2 = 2$

(Bottom-Right)

	0	1	2	3
0	5	10	15	20
1	6	12	20	23
2	7	14	21	30
3	17	26	33	48

TL: (1,2)

BR: (2,2)

To define a submatrix: r_1, c_1, r_2, c_2

Question: Find sum of all submatrices.

$$A: \begin{bmatrix} 4 & 9 & 6 \\ 5 & -1 & 2 \end{bmatrix}$$

$$[4]=4 \quad [9]=9 \quad [6]=6 \quad [5]=5 \quad [-1]=-1 \quad [2]=2$$

$$\begin{matrix} [4 \ 9] & [9 \ 6] & [5 \ -1] & [-1 \ 2] \\ 13 & 15 & 4 & 1 \end{matrix}$$

$$\begin{matrix} [4 \ 9 \ 6] & [5 \ -1 \ 2] \\ 19 & 6 \end{matrix}$$

$$\begin{matrix} \begin{bmatrix} 4 \\ 5 \end{bmatrix} & \begin{bmatrix} 9 \\ -1 \end{bmatrix} & \begin{bmatrix} 6 \\ 2 \end{bmatrix} \\ 9 & 8 & 8 \end{matrix}$$

$$\begin{matrix} \begin{bmatrix} 4 & 9 \\ 5 & -1 \end{bmatrix} & \begin{bmatrix} 9 & 6 \\ -1 & 2 \end{bmatrix} \\ 17 & 16 \end{matrix}$$

$$\begin{bmatrix} 4 & 9 & 6 \\ 5 & -1 & 2 \end{bmatrix} \\ 25$$

Approach: Contribution Technique

for every $A[i][j]$, find # of submatrices in which it is a part of.

To define a submatrix:

$\delta 1:$ $[0, i]$ $\Rightarrow (i+1)$ ✓
 $\delta 2:$ $[i, N-1]$ ✓ $(N-i)$
 $c 1:$ $[0, j]$ ✓ $(j+1)$
 $c 2:$ $[j, M-1]$ ✓ $(M-j)$

$$\text{count} = (i+1)(N-i)(j+1)(M-j)$$

for ($i = 0 \rightarrow N-1$) {

for ($j = 0 \rightarrow M-1$) {

$$\text{count} = (i+1)(N-i)(j+1)(M-j)$$

$$\text{ans} += \text{count} \times A[i][j];$$

}

} return ans;

T.C: $O(N \cdot M)$

S.C: $O(1)$

8:24

Question: Given an unsorted array of positive integers, find the first missing natural numbers

✓ $A = [3, 7, 2, 1, 2, 6] \Rightarrow 4$
 0 1 2 3 4 5

$A = [9, 2, 6, 4, 8, 1, 3] \Rightarrow 5$
 1 2 3 4 5 6 7

$A = [3, 4, 5, 8, 3, 7, 8, 4, 7] \Rightarrow 1$

$A = [4, 2, 1, 3] \Rightarrow 5$

$\Rightarrow A = [1, 2, 5, 6, 4, 3] \Rightarrow 7$

$\Rightarrow A = [2, 1000, 4000]$ Ans: $[1, N+1]$

Brute Force

for ($i=1; i \leq N+1; i++$) {
 \rightarrow // check if i exists $\Rightarrow O(N)$

}

T.C: $O(N^2)$

S.C: $O(1)$

Approach 2 : Sort the array

→ Iterate and find the 1st missing natural number

T.C: $O(N \log N)$

S.C: $O(1)$

Approach:

Ans: $[1, n+1]$

-) If any number in $[1, N]$ is not present, then that missing number will be the answer

→ If all numbers in $[1, N]$ are present,
then $N+1$ will be the answer

$$1, 2, 3, \dots, N, N+1$$

A:

↓ ↓ ↓ ↓ ↓ ↓

-8 -1 -4 -2 6 -3

0 1 2 3 4 5

↑ ↑ ↑ ↑ ↑

$\Rightarrow 5$ is missing

$$N = 6$$

Ans: [1, 7] ✓

0: Mark the presence of 1
1: 1 1 1 1 1 2

A: [-9, -2, -6, 2, 8, -1, 3]
0 1 2 3 4 5 6
↑ ↑ ↑ ↑
N = 7
=> 4 is missing

Ans: [1, 8]

Index 0: 1
1: 2
2: 3

```
for(i -> 0 to N - 1) {
    ele = absolute(A[i]); ✓
    if(ele >= 1 and ele <= N) {
        int idx = ele - 1;
        A[idx] = -1 * absolute(A[i]); ✗
    }
}
```

```
for(i -> 0 to N - 1) {
    if(A[i] > 0) return i + 1;
}
return N + 1;
```

Question: We can have negative numbers also

$$A = \begin{bmatrix} -3 & 4 & 2 & 9 \\ 0 & 1 & 2 & 3 \end{bmatrix} \quad \checkmark \quad \text{Ans: } [1, 5]$$

Will negative ever be my answer? NO?

Should we make them +ve? NO?

→ Change all -ve numbers to a value which is never the answer

→ May be change it to $N+2$

$$A = \begin{bmatrix} 0 & 1 & 4 & 3 \\ 0 & 1 & 2 & 3 \end{bmatrix}$$

```

for(i -> 0 to N - 1) {
    if(A[i] <= 0) {
        A[i] = N + 2;
    }
}

for(i -> 0 to N - 1) {
    ele = abs(A[i]);

    if(ele >= 1 && ele <= N) {
        idx = ele - 1;
        A[idx] = -1 * abs(A[i]);
    }
}

for(i -> 0 to N - 1) {
    if(A[i] > 0) return i + 1;
}
return N + 1;

```

T.C : $O(N)$

S.C: $O(1)$

$A = \begin{bmatrix} -1 & 1 & -1 & -2 & -3 \\ 0 & 1 & 2 & 3 & 4 \end{bmatrix}$

$N = 5$

Ans: [1, 6]

r_1, r_2, c_1, c_2

$\left. \begin{array}{l} r_1: [0, 4] \\ r_2: [4, N-1] \\ c_1: [0, 3] \\ c_2: [3, M-1] \end{array} \right\} \begin{array}{l} [0, i] \\ [i, N-1] \end{array}$

$$A = \begin{bmatrix} 0 & 1 & 3 \\ 0 & 1 & 2 \end{bmatrix}$$

$$A = \begin{bmatrix} 1 & 1000, 100000 \end{bmatrix}_{N=4}$$

$$A = \begin{bmatrix} 4 & 2 & 3 & 1 \end{bmatrix}_{N=4}$$
